(54) Title: SCRIPT GENERATION

(57) Abstract: Indirect update functions, for updating a form, are generated by supplying update functions to a synthesiser, and generating an activation network, based on these update functions. The invocation sequence of the activation network is then determined, and used to update elements of a form. The generation of the invocation sequence by the synthesiser removes the need for complex hand encoding of form structures, and provides a means by which the functions may be generated as part of a server, client or middleware application.
